# Oscilloscope Probes and Accessories

## Introduction

To get the most out of your oscilloscope, you need the right probes and accessories for your particular applications. Whether you need the high bandwidth and low loading of an active probe, an easy way to connect to surface mount ICs or a passive probe to measure high voltages, there are a wide selection of high-quality probes and accessories for your Keysight Technologies, Inc. oscilloscope.

## How To Select A Probe

Selecting the correct probe for your oscilloscope measurement should not be difficult. This brochure provides suggestions on how to make the best decision. Following is a list of probe parameters you need to consider when you select a probe for a given measurement.

### Attenuation

Choose the attenuation ratio of the probe (1:1, 10:1, 100:1, 1000:1) to match the test signal amplitude to the oscilloscope's vertical sensitivity range. Higher attenuation probe allows the measurement range of a scope to be extended, and lower attenuation probe allows for lower noise measurement.

### Bandwidth (BW)

The probe's rated bandwidth should match the oscilloscope's and be adequate for the test signal. However, at higher frequencies, grounded lead inductance and input capacitance often influence system performance more than probe bandwidth.

### Input resistance ( $R_{in}$ )

Input impedance is used to describe the loading effects of a probe. At DC and low frequency ranges, the probe's resistive component is the main factor that loads down the circuit under test. However, as the frequency goes up, the capacitance of the probe tip, in parallel with the DC resistance, starts to reduce the input impedance of the probe, resulting in greater loading and a more adverse effect to the target.

### Input capacitance ( $C_{in}$ )

Excessive input capacitance (sometimes called tip capacitance) slows down the system's pulse response. Usually the least input capacitance possible is best.

### Maximum input voltage ( $V_{max}$ )

To ensure user safety, help protect the oscilloscope input from destructive voltage, and avoid damage to the probe, select a probe that is rated for a higher voltage than the signal you intend to test.

### Probe compensation range

Most passive probes have a specification that lists the oscilloscope input capacitance range over which they can be used. When choosing a passive probe, be sure that the oscilloscope's input capacitance lies within the probe's compensation range or you will not be able to adjust the probe to achieve a correctly compensated square wave signal.

### Probe output termination

Most oscilloscopes have  $1\text{-M}\Omega$  and/or  $50\ \Omega$  input resistance. For proper signal transfer and optimum signal integrity, it's important that the probe's R and C match the R and C of the oscilloscope it is to be used with. For example,  $50\ \Omega$  terminated probes should be used with  $50\ \Omega$  scope inputs. Similarly,  $1\text{ M}\Omega$  terminated probes should be used on scopes with a  $1\text{ M}\Omega$  input resistance.

## Probe interface

Most Keysight oscilloscope probes offer either a BNC type of probe interface or the AutoProbe interface. The AutoProbe interface is an intelligent communication and power link between compatible probes and the Infinium or InfiniiVision Series oscilloscopes. The AutoProbe identifies the type of probe attached and sets up the proper input impedance, attenuation ratio, probe power, and offset range as needed.

## Probe tip form factor

Your probe must make a reliable connection to the test point, and you may want it to grab the test point. Generally, this requires a small and light probe and a tip or grabber that is compatible with the test point. SMT and fine-pitch geometries make this issue especially critical.

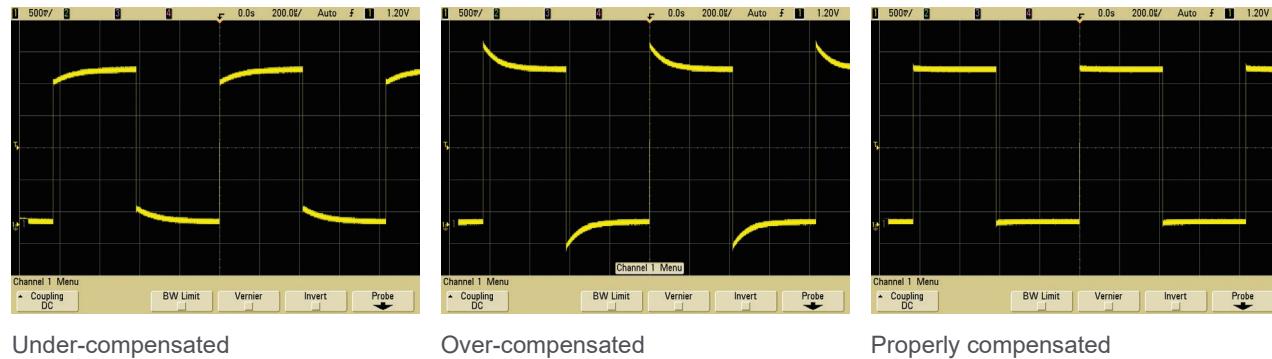

## Single-ended, Differential or InfiniiMode Probe

Two most common voltage probe types are single-ended and differential probe.

Differential probes measure the voltage difference between any two input points in contrast to a single-ended probe, which measures input voltage relative to ground. Differential probes are especially popular for measuring high-frequency signals or signals where neither are referenced to ground. Differential probes use a differential amplifier to convert the difference between two signals into a voltage that can be sent to a typical single-ended scope input.

A differential probe can be used to make single-ended measurements by using its negative input as a ground reference contact and there are several advantages to using a differential probe to make single-ended measurement. New InfiniiMode probes offer multiple modes that can measure single-ended, differential, and common-mode characteristics of a differential signal with a signal connection.

## Types of Probes

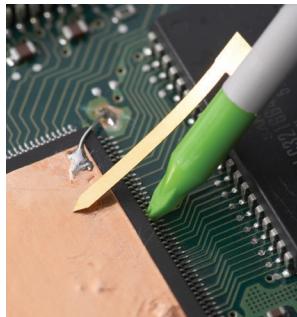

### Passive probes

The most widely used type of oscilloscope probe is the “passive probe.” Passive probes are also the most rugged and economical. There are no active components such as transistors or amplifiers in the probe, and therefore passive probes do not need to be powered.

### Passive probes classifications

1. The N2894A provides 700 MHz system bandwidth with the 4000X and 6000X Series 1 GHz or higher bandwidth models only.

## Single-ended active probes

Active probes contain a small, active amplifier built into the probe body near the probe tip. This arrangement makes it possible to keep the probe input capacitance very low, usually less than 2 pF. This low capacitance results in high input impedance on high frequencies. It has the best overall combination of resistive and capacitive loading. With such low loading, active probes can be used on high-impedance circuits that would be seriously loaded by passive probes. Active probes are the least intrusive of all the probes.

## Single-ended active probe characteristics

Model	Attenuation	Probe bandwidth	Input dynamic range	Applications and use	Oscilloscope compatibility
N2795A	10:1	1 GHz	0 to $\pm 8$ V	General-purpose, high-speed probing in digital and analog system design	50- $\Omega$ AutoProbe interface input
N2796A	10:1	2 GHz	0 to $\pm 8$ V		
N2797A	10:1	1.5 GHz	0 to $\pm 8$ V	Extreme temperature probing at -40 to +85 °C	
N7020A	1.1:1	2 GHz	0 to $\pm 850$ mV	General purpose power integrity measurement of DC power rails	3000T/4000X/6000X/S-Series/9000
N7024A	1.3:1	6 GHz	0 to $\pm 600$ mV	Power integrity measurement in high speed systems using Infiniium	S, 90000X, V, Z and Q Series (requires N5442A with AutoProbe II interface scopes)

Single-ended active probe advantages	Limitations
Timing and voltage measurements are more accurate at high bandwidths	Active probes are more expensive than general-purpose passive probes
Active probes are the least intrusive to circuits under test	Active probes have lower dynamic range, lower maximum voltage and are less rugged than passive probes

N7020A 2 GHz power rail probe

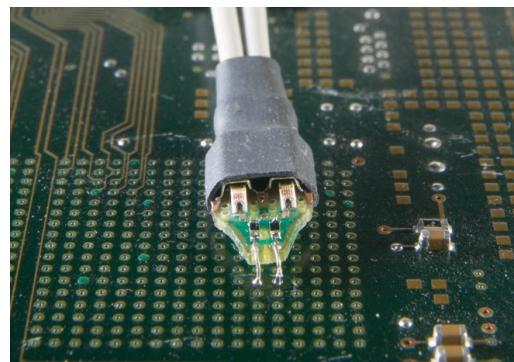

N7024A 6 GHz power rail probe

N2795A/N2796A 1/2-GHz active probe with AutoProbe interface, head light, and 1 MΩ input Z

N2795A/96A comes with a headlight for better visibility while probing

## Differential active probes

A “differential” probe is an active probe that has two inputs, one positive and one negative, as well as a separate ground lead. It drives a single-terminated 50- $\Omega$  cable to transmit its output to one oscilloscope channel. The output signal is proportional to the difference between the voltages appearing at the two inputs. A differential probe is used to look at signals that are referenced to each other instead of earth ground and to look at small signals in the presence of large DC offsets or other common mode signals such as power line noise.

## InfiniiMax probe heads and accessories

Keysight's InfiniiMax probing system supports a wide variety of high-speed probing applications with an extensive line-up of probe heads and accessories. Most InfiniiMax probe heads and accessories are split up into 2 groups based on input impedance architecture: RC architecture (Gen I, II, RC, and Ultra) and RCRC architecture (Gen III and III+). RC probe heads are only compatible with RC probe amplifiers; likewise, RCRC probe heads are only compatible with RCRC probe amplifiers.

### InfiniiMax RC architecture probe heads and accessories

The following table lists all compatible RC probe heads and accessories. These are compatible with InfiniiMax Gen I/II/RC/Ultra probe amplifiers except where noted.

E2655C	13 GHz	Performance verification and deskew fixture
MX0104A	40 GHz	Performance verification and deskew fixture
MX0109A	26 GHz	extreme temperature solder-in head, supports InfiniiMode
N2787A	N/A	3D probe positioner
N2812A	N/A	high performance input cable, 2.92 mm connectors, 1 m length
N2823A	40 GHz	2.92 mm phase-matched cable pair (1m)
N2835A	N/A	InfiniiMax III/III+ differential connectivity kit (N5439A/45A, N2836A/38A/48A/49A)
N2838-68701	N/A	10x 130-ohm resistors for tip resistor replacement
N2838A	25 GHz	450-ohm PCB ZIF tips (set of five)
N2848A	16 GHz	QuickTip probe head, supports InfiniiMode
N2849A	16 GHz	QuickTip tips (set of 4)
N2852A	N/A	AutoProbe II to AutoProbe III interface adapter
N5381B	12 GHz	wire tips
N5439A	28 GHz	ZIF probe head
N5440A	28 GHz	450-ohm ceramic ZIF tip kit (set of five)
N5442A	N/A	3.5 mm to precision BNC adapter
N5444A	30 GHz	3.5/2.92 SMA probe head, supports InfiniiMode
N5445A	30 GHz	differential browser probe head
N5447A	28 GHz	200-ohm ceramic ZIF tip kit (set of five)
N5448B	40 GHz	2.92 mm phase-matched cable pair (25cm)
N5449A	N/A	High impedance probe adapter, include one N2878A 500 MHz 10:1 passive probe

Model	Bandwidth	Description
N5450B	N/A	extreme temperature extension cable, 1 m long
N5476A	30 GHz	browser tip replacement (set of 4)
N5477A	N/A	sampling scope adapter <sup>1</sup>

N2750A-02A  
InfiniiMode probe with standard accessories

InfiniiMode probe with either socketed tip or solder-in tip allows convenient measurements of differential, SE and CM signals with a single probe. Probe head light is built-in

Active differential probe advantages	Limitations
View small signals in the presence of DC or other common mode signals	<ul style="list-style-type: none"> <li>More expensive than general-purpose passive probes</li> <li>Less dynamic range than using two passive probes</li> </ul>
DP0001A/N2790A helps you make safe and accurate high-speed floating measurements. AutoProbe interface supplies probe power	400/100-MHz bandwidth, must be used with AutoProbe interface scope
N2791A/92A/93A and N2891A are low-cost differential probes that can be powered by USB port or by internal batteries	25-, 200-, 800-, 70-MHz bandwidth
N2818A/19A are the AutoProbe interface version of N2792A/93A	200-, 800-MHz bandwidth
1130B-34B, 1168B/69B and N2800A/01A/02A/03A InfiniiMax probe probes both single-ended and differential signals up to 30-GHz bandwidth	Lower dynamic range and maximum input voltage (but has ultra-low input capacitance)
N2750A/51A/52A InfiniiMode probes allow for making differential, single-ended and common mode measurements with a single probe.	Supports browser, solder-in and socketed tip use models only, bandwidth is limited with solder-in and socketed tip

1130B-34B, 1168B/69B InfiniiMax high-bandwidth differential probe and its probe head configurations

N2793A 800-MHz, 15-V differential probe with standard accessories

DP0001A 400 MHz, 2 kV differential probe with standard accessories

N2791A 25-MHz, 700-V differential probe with standard accessories

N2792A 200-MHz, 20-V differential probe with standard accessories

## Current probes

Current probes sense the current flowing through a conductor and convert it to a voltage that can be viewed and measured on an oscilloscope. Keysight current probes use a hybrid technology that includes a Hall-effect sensor, which senses the DC current, and a current transformer, which senses the AC current. Using split core construction, the current probe easily clips on and off of a conductor, making it unnecessary to make an electrical connection to the circuit. Measurement bandwidths from DC to 150 MHz are available. The new N7040A/41A/42A is a family of Rogowski AC current probe for measuring large AC current conveniently. These probes have a flexible clip-around sensor coil that can easily be wrapped around current carrying test points for measurement and can measure large current without increase in transducer size.

## Optical-to-electrical converter

Optical-to-electrical converter transduces optical signals into electrical signals for convenient analysis on oscilloscope. Keysight N7004A and N7005A optical-to-electrical converter is a high-sensitivity DC-coupled photodetector module designed for direct optical-to-electrical conversion of optical telecommunication or data communication signals into an Infiniium real-time oscilloscope.

Each N7004A or N7005A adapter contains a measured S-parameter for an optimized correction filter, and this frequency response data is used to flatten the frequency response for a more accurate measurement.

### N7004A characteristics

- DC to 33 GHz typical (-3 dBe, electrical)
- Single-mode and multimode inputs
- 50/125  $\mu$ m, 750 nm to 1650 nm (covers main wavelengths: 850 nm, 1310 nm, and 1550 nm)
- Designed for reference receiver testing of industry optical standards or characterizing raw response of an optical transmitter
- Optical measurement features built into the Infiniium baseline software version 05.70 or higher
- Compatible with Infiniium UXR, V-Series, 90000 X-Series, Z-Series and discontinued 90000 Q-Series real-time oscilloscopes

### N7005A characteristics

- DC to 60 GHz typical (-3 dBe, electrical)
- Single-mode input
- 9/125  $\mu$ m, 1250 nm to 1600 nm (covers main wavelengths: 1310 nm, and 1550 nm)
- FlexDCA SW supports PAM4 measurement capabilities such as TDECQ for Infiniium UXR oscilloscopes and N7005A
- Optical measurement features built into the Infiniium UXR baseline software version
- 10.25 or higher
- Compatible with Infiniium UXR oscilloscope with  $\geq 40$  GHz bandwidth

N7005A 60 GHz optical to electrical converter

## Probing accessories

Probe positioners		
N2784A	One-arm probe positioner (for browsing)	Compatible with most scope probes
N2785A	Two-arm probe positioner (for browsing)	Compatible with most scope probes
N2786A	Two-leg probe positioner	Compatible with most scope passive probes
N2787A	3D probe positioner	Compatible with most Keysight probes including InfiniiMax browsers

Refer to the Probe Positioners - Data Sheet, publication number 5989-9131EN, for probe compatibility details.

Mixed signal oscilloscope logic probe		
N6459-60001	Logic probe with 1x8 flying leads (shipped with 2000 X-Series MSOs)	Compatible with 2000 X-Series MSOs
N6450-60001	Logic probe with 2x8 flying leads (shipped with 3000/4000 X-Series MSOs)	Compatible with 3000/4000 X-Series MSOs
N2756A	Logic probe with 16-channel flying leads (shipped with 6000 X-Series MSOs)	Compatible with 6000 X-Series MSOs
54620-68701	Logic probe with 2x8 flying leads (shipped with 6000/7000 Series MSOs)	Compatible with 6000/7000/54600 Series MSOs
10085-68701 <sup>1</sup>	40-pin logic probe and termination adapter	Compatible with 6000/7000/54600 Series MSOs
54826-68701	Logic probe kit for Infiniium MSOs (shipped with 8000 Series MSOs)	Compatible with 8000/54830 Series MSOs
E5396A	16-channel Soft Touch connectorless logic probe	Compatible with 6000/8000/54830 Series MSOs
54904-61615	Logic probe kit for Infiniium 9000 Series MSOs (shipped with 9000 Series MSOs)	Compatible with 9000 Series MSOs

- With the addition of a 40-pin logic cable, the Keysight MSO accepts numerous logic analyzer accessories such as Mictor, Samtec, flying leads, or Soft touch connectorless probe.

Wedge probe adapter		
<ul style="list-style-type: none"> <li>Easy connection to 0.5 or 0.65 mm TQFP and PQFP packages</li> <li>Reliable contact with little chance of shorting to adjacent pins</li> <li>3-, 8-, and 16-signal versions</li> </ul>

IC clip kit		
10075A	0.5 mm IC clip kit	For 10070 Series passive probes
Probe accessory kits		
10072A	SMT probe accessory kit	For 10070 Series passive probes
10077A	Accessory kit for 10076A/B/C high voltage probe	For 10076A/B/C
N2877A	Deluxe accessory kit	For N2870A Series passive probes
N2878A	General purpose accessory kit	For N2870A Series passive probes
N2879A	Fine-pitch accessory kit	For N2870A Series passive probes
PC board mini-probe sockets		
N2766A	Horizontal mini-probe socket, qty 25	Compatible with 1160A-65A and 104xxB passive probes
N2768A	Vertical mini-probe socket, qty 25	Compatible with 1160A-65A and 104xxB passive probes
N2885A	PCB adapter kit, qty 25	For N2870A Series passive probes
N4827A	PCB socket adapter	N2862B/63B/89A/90A passive probes
N4863A	Probe tip to PCB adapter, horizontal	N2870A-76A, N2894A
N4864A	Probe tip to PCB adapter, vertical	N2870A-76A, N2894A
Probe interface adapters		
E2697A	1-MΩ high-impedance adapter (includes one 10073C 500-MHz passive probe)	Compatible with Infinium oscilloscope's 50-Ω input with AutoProbe I interface
N5449A	High impedance probe adapter (includes one N2873A 500-MHz passive probe)	For use with high impedance passive or active probes and Infinium scope with AutoProbe II interface
N5442A	Precision BNC 50-Ω adapter	For use with InfiniiMax I, II, III+ (N2830A-32A), N2795A-97A, N2750A-52A active probes with AutoProbe I interface and with Infinium with AutoProbe II interface
N1022B	Sampling oscilloscope adapter	For use with InfiniiMax I and II probes with Keysight 86100C DCA-j sampling oscilloscope
N5477A	Sampling oscilloscope adapter	For use with InfiniiMax III probe and Keysight 86100C DCA-J sampling oscilloscope
N2744A	T2A probe interface adapter	Enables TekProbe BNC probes to connect to Keysight's AutoProbe interface
BNC adapter		
N2882A	75 Ω (f) to 50 Ω (m) BNC adapter	Compatible with any oscilloscope's 50-Ω BNC input
Probe deskew fixtures		
E2655C	Probe deskew and performance verification kit for InfiniiMax I/II/III+ probes	
U1880A	Power measurement deskew fixture	
MX0104A	Probe deskew and performance verification fixture for InfiniiMax RC/III/III+ probes
